

PDX10B-SI User Guide

Quickstart

PDX10B-SI user interface

1. Supply +VCC pin with a voltage from 5.5 V to 9 V, nom. 6 V. Supply -VCC pin with a voltage from -9 V to -5.5 V, nom. -6 V.
2. Illuminate the photodiodes with a maximum of 3 mW optical power.
3. Use MON+ and MON- outputs to align and balance the power on the photodiodes.
4. The output is available on the SMA connector (50 Ω impedance).
